

Homework 5

HW5 (a) polymorphism and encapsulation

This homework uses the programs in HW5a.zip.

Question 1: Take the programs in the above file and make them compile. The compile errors should all be related to whether or not fields and methods are visible to inheriting or using classes.

Question 2: For each print statement in a class, and for each print statement in the main routine, tell which class' functions are called in that statement.

HW5 (b): Say what is printed by the program.

Rename the directory HW5 (which contains sub-directories HW5a and HW5b) <firstname>.<lastname>, zip it, and upload it to blackboard.
