HW 4 Instructions

HW4 (a): Read the instructions in the comments of the Main.java file of HW4a directory.

HW4 (b): Use the files in the HW4b directory.

Some of the calls in the .java files are illegal because they access private methods defined in another class. Comment these out. For all remaining calls in Main, and in the "Caller" functions when called from Main, determine what functions are called. Include these in comments in the Main.java class. You can check your answers by running the resulting file and seeing what actually prints.

Turnin:

You should have a HW4 directory with HW4a and HW4b sub-directories. Rename the HW4 directory containing the subdirectories to <firstname>.<lastname>, zip it, and turn it in to Blackboard. Do not turn in the .class files.
